

Risk Assessment Evaluation & Planning	
Name: Stephan Anderson	Date: January 22, 2003
Participants: Brenda Smith, Service Coordinator; Mary Anderson, Mother; Rhonda Johnson, XYZ Day Services; Frances Mathers, Administrator	
Tasks Completed for Assessment:	
Documents Reviewed: Complete case record; medication history ; history and physical; CDER 11/27/02; PT Eval 10/11/02; Clinical Team Report 12/16/02	
People Interviewed: All above participants and Dr Michael Holmes, neurologist	
Assessments Completed or Referral Made: Seen by Clinical Team 12/16/02	
Significant Risks Identified: 1. Uncontrolled seizures as defined as averaging six per year for the past four years.	
Plan: 1. Stephen must never be alone in a situation where a seizure could risk his life – bath; must be accompanied when traveling; (Residence, day program, family) 2. Modify environment for safety: bed rails because 4/6 seizures occurred at night (residence) 3. Quarterly monitoring of blood levels of medications (Dr Holmes-residence will document) 4. High protein diet as recommended by neurologist (home) 5. Consumer education – to help Stephen make informed decisions- (day program)	
Location of Plan Information: IPP of January 21, 2003; monitored quarterly	
Other Information: Although Dr Holmes strongly recommends the use of a helmet, Steve stated on January 21, 2003, that he would "...never get a girlfriend wearing one of those things". XYZ will provide education about safety and helmets and will reevaluate Steve's preferences in April, 2003. Steve did agree to this education and to bed rails and a special diet. He takes his medication independently and appears to understand the danger of being hurt if he is alone. He said that he doesn't want to drown in the tub like his friend Frank R., and it is okay for staff to be near as long as they don't watch him bathe.
